Table of contents Geometrical Quality of TLS

- 1 Introduction
- 2 The geometrical quality of the measurements
 - 2.1 Different methods
 - 2.2 Specifications from the manufacturers
- 3 Practical Test for the Quality of Point Clouds
 - 3.1 Resolution-Test
 - 3.2 Noise-Test
 - 3.3 Accuracy-Test
- 4 System Calibration – Overall accuracy of 10 scans
 - 4.1 Description
 - 4.2 Results
- 5 Conclusions

20.4.2005 The Geometrical Quality of TLS - R. STAIGER 2

Comparison Measurement and Modeling Tacheometer <-> Scanner

Tacheometer	Scanner
<ul style="list-style-type: none"> - a few points are observed precisely - Points are representative - effort per point is high - "Think" in 3D-points - Quality -> points 	<ul style="list-style-type: none"> - a mass of arbitrary points (regular grid?) - points are non-representative - effort per point very small - "Think" in 3D-elements - Quality -> geometrical elements

$X_5 = 234.567$
 $Y_5 = 56.008$
 $Z_5 = -270.443$

$X_{13} = 108.565$
 $Y_{13} = 176.123$
 $Z_{13} = 6.462$

Specifications manufacturer

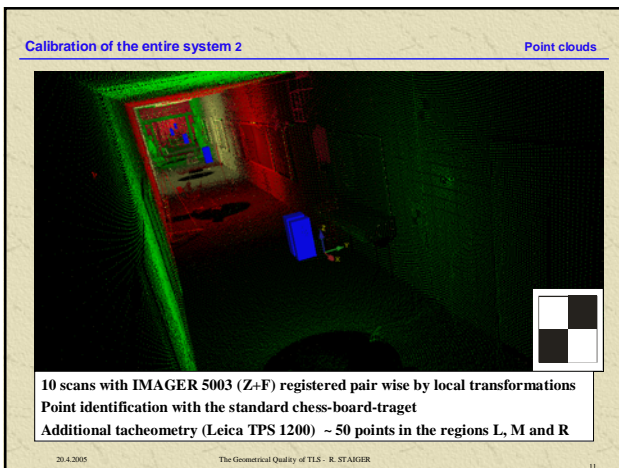

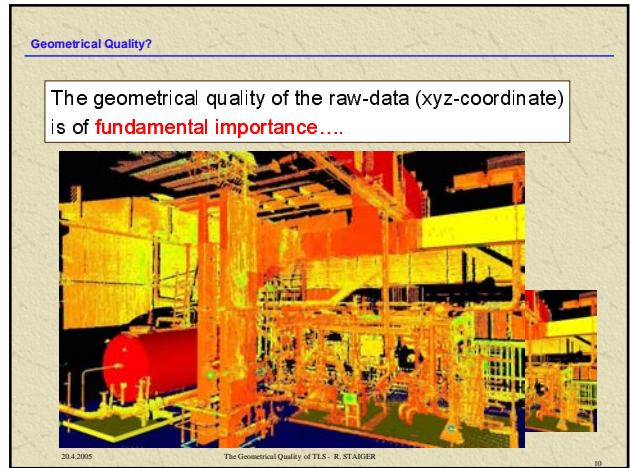

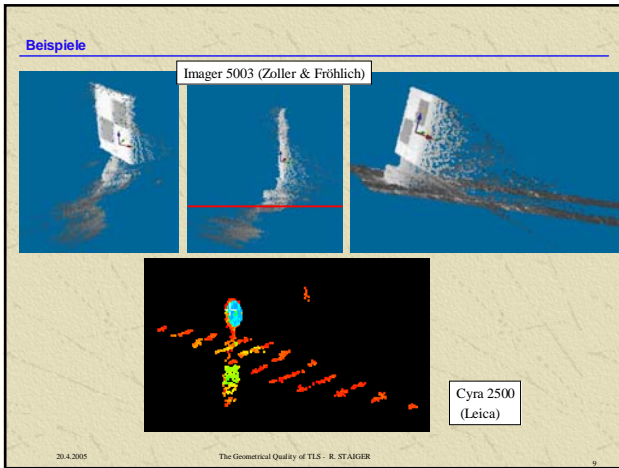

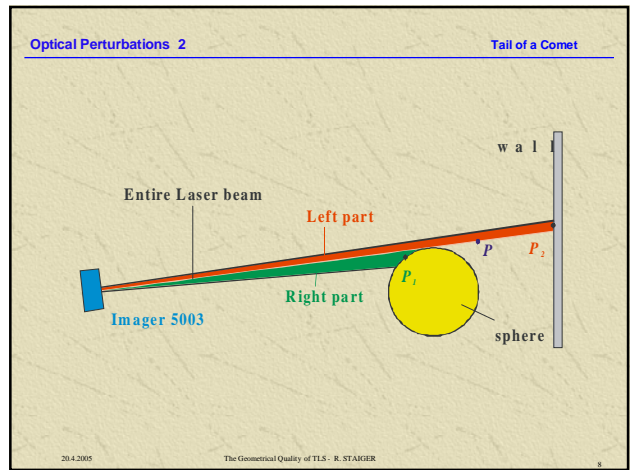

Manuf.	Product	Angle	Distance	Position	Element
Callidus	CP 3200	A^1 : 0,009°(V) A^1 : 0,005°(Hz)	A^2 : 5 mm		A : ±2,5 mm (plane)
Cyra	HDS 3000	A^1 : 60 µrad	A : ±4 mm	A : 6 mm @ 50 m	A : 2 mm (plane) ⁷
Iqsun	880	R : 0,0011°(V) R : 0,00076°(Hz)	U^4 : 3mm @ 10m		
Mensi	GS 200	R : 32 µrad	$U^{5,6}$: 1,4–6,5 mm $T^{5,6}$: 3–10 mm	R : 3 mm @ 100 m	
Optech	ILRIS-3D			A : 10 mm	
Riegl	LMS Z 420 i	R : 0,0025°	A : 10 / 5 mm ⁶	R : 5 mm	
Z & F	IMAGER 5003	R : 0,018°(V) R : 0,01°(Hz)	L : 5 mm		

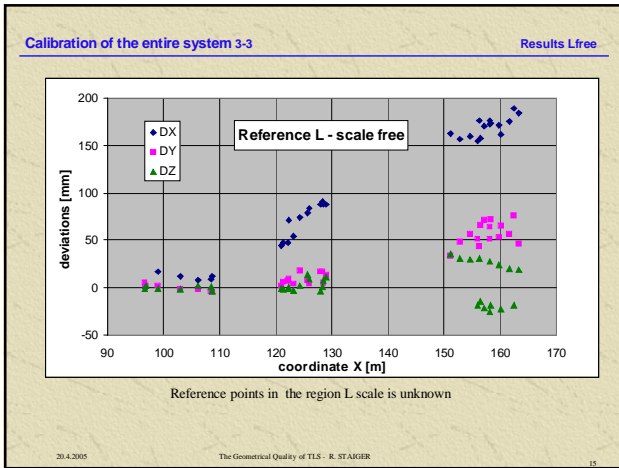

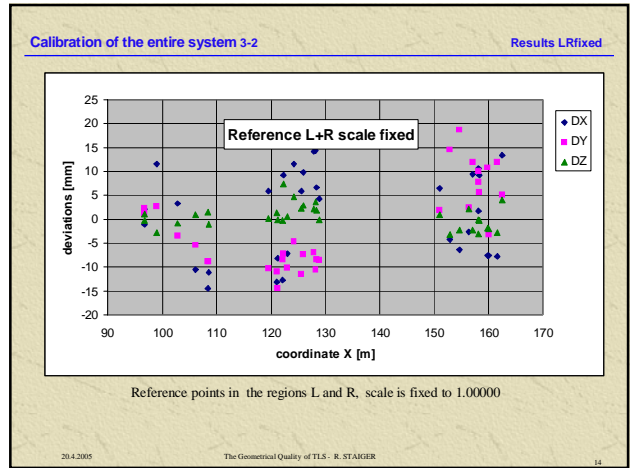

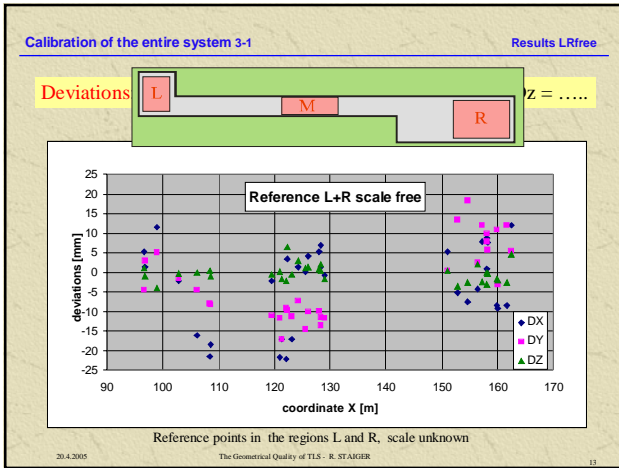

¹Hz + V
²typical accuracy
³depends on averaging
⁴reflectivity of 84%
⁵between 5 and 100 m
⁶average
⁷CYRA 2500

A : Accuracy L : Linearity
 P : Precision R : Resolution
 U : Uncertainty T : Tolerance

20.4.2005 The Geometrical Quality of TLS - R. STAIGER 4

Conclusions

System specifications manufacturer.....
 not reproducible and not standardized
 Requirement for standardized specifications which can be reproduced
 ideal case related to geometrical elements

Geometrical Quality of the scans
 check on different levels
 - measurement noise Theory and practice
 - component methods distance or angle part
 - system calibration method (incl. Registration, Point identification, Geo-referencing, etc...)

System check accuracy
 Example: IMAGER 5003 (ZF), 10 scans, Area of 15 X 90 m
 good to ideal conditions L+R 10 - 20 mm scale no influence
 unfavorable conditions L or R only 100 - 200 mm scale strong influence

20.4.2005 The Geometrical Quality of TLS - R. STÄNGER 17
