

# **Cadastral Data Infrastructure Building Strategy In Delta State of Nigeria.**

**Thomas Dabiri (Nigeria)**

**Key words:** Cadastre; Land management; Cadastral Data Infrastructure; Building; Strategy

## **SUMMARY**

The Cadastral Data Infrastructure (CDI) in Delta State of Nigeria is rudimentary; with poor and weak chains for a good linkage of Land Administration and Management with good governance and sustainability.

The objectives of this paper are to show the present state of CDI in the state; to show the need for building a brand new one; to show the strategy for building it and the necessity for the CDI. The challenges that can be of impediments are purely political and bureaucratic which made the strategy a case study; Private Public Partnership (PPP) Approach shall be the basic cost bearing of the project.

CDI in our environment can be itemized using the Survey Principle of "working from whole to parts":

1. Positioning Infrastructure.
2. General Data Management Infrastructure.
3. General Data Application Infrastructure.

In conclusion; the significance of the work shall be presented in the paper
