

The Role of Historical Knowledge in a Modern Cadastre

Klaas van der Hoek (Netherlands)

Key words: Cadastre; Digital cadastre; Education; History

SUMMARY

At the start of my working period, almost 47 years ago, all was analogue, map and administration/registration. Nowadays everything is digital. But made by a conversion. That means that the quality is known of the digital data. And that is a different than original digital data. My message is how can old/historical knowledge help to transfer to the next generation. I see this as a kind of Fit-for-purpose. But not technologic but knowing the black box.

So how can old knowledge help in knowledge transfer to the next generation.
