WHAT DO WE DO?

We produce the official map and cartography of Colombia

We train and educate professionals in geographic information technologies

We are the Cadastral authority

We carry out geographical investigations

We carry out an inventory of the characteristics of the soils

We coordinate the Colombian Spatial Data Infrastructure (ICDE)

Research and Prospective technical direction

- Research Center recognized. SNCTeI .
- CIAF. More than 50 years of experience in research, development and training in geospatial technologies. 25.000 students from Colombia and the Latin American region.

Spectral libraries and satellite images: resampling from 650 bands (aprox.) to 5 bands (Planet Scope)

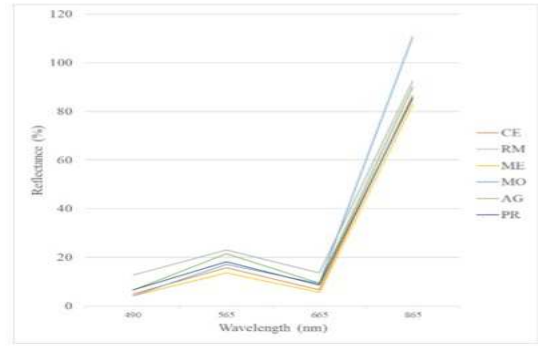

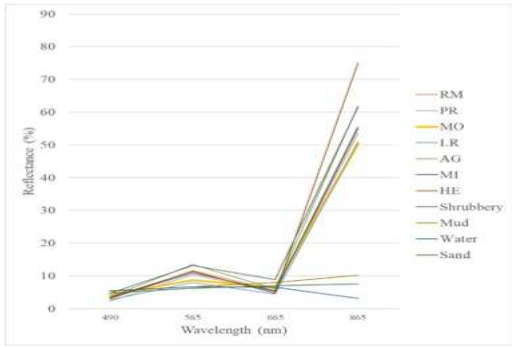

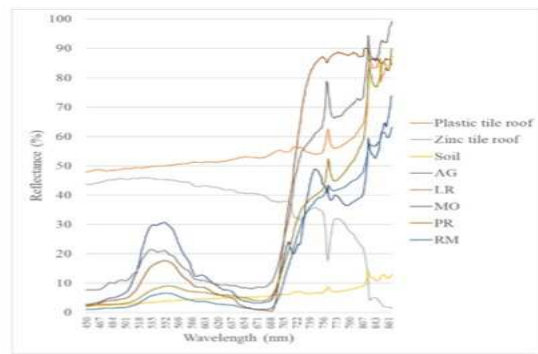

NNP Sanquianga: 64 mangrove signatures, 6 endmembers*

NNP Málaga Bay: 23 mangrove signatures, 6 endmembers*

Gulf of Tribugá: (65) 12 mangrove signatures, 5 endmembers*

Planetscope (PS2.5D)

Spectral region	PlanetScope spectral range	Wavelength center
Ultraviolet (<450)		-
Blue	450-520	490
Green	540-600	565
Red	640-700	665
NIR<900	840-900	865
NIR>900	900-1000	-

Mangrove species identified

Name	Scientific Name	Ab.
Black mangrove	<i>Avicennia germinans</i>	AG
Majagua (non mangrove)	<i>Hibiscus elatus</i>	HE
White mangrove	<i>Laguncularia racemosa</i>	LR
Nato mangrove	<i>Mora oleifera</i>	MO
Red mangrove	<i>Rhizophora mangle</i>	RM
Piñuelo mangrove	<i>Pelliciera rhizophorae</i>	PR

Conclusions, recommendations, ongoing and future work

- The PlanetScope images, despite their limitations (spectral, radiometric and spatial), gave a clearly differentiated result in the classification with the spectral signatures (**atmospheric correction is vital**).
- Field protocols must be adjusted to sampling the different strata of the mangrove forest, considering the presence, distribution and relationship of species in a sampling area, and the effect of the ground and the tide.
- Is highly recommended to establish monitoring plots of mangrove forest specifically for earth observation data.
- Additional field campaigns are needed to validate the classification results
- Current and trending AI techniques on endmember generation and image classification could lead to better results.
- Explore further biophysical variables into the analyses.
